# Fresh Deciduous Fruit: World Markets and Trade (Apples, Grapes, \& Pears) 

## FRESH APPLES

World apple production in marketing year 2015/16 is forecast to increase slightly to 77.0 million metric tons (tons) as increases in China are partially offset by decreases in the European Union (EU) and the United States. Global trade is forecast to remain stable at 6.7 million tons despite Russia's continued ban on fruit from certain countries.

China's production continues to increase, rising 2.1 million tons to 43.0 million on favorable weather conditions and an increase in bearing acreage. Exports are forecast to rebound 150,000 tons to 900,000 as lower production costs make its product more competitive in Asian markets. Imports are forecast to surge 32,000 tons to 100,000 largely due to higher shipments from the United States resulting from the January 2015 agreement.

EU's production is forecast to decrease 1.4 million tons to 12.0 million after last year's record crop. Despite Russia's ban on EU imports, historically the EU's top market, exports are expected to remain elevated at 1.6 million tons on continued strong shipments to Belarus, Egypt, and Algeria. EU imports are forecast to rebound, up 52,000 tons to 450,000 on lower domestic available supplies.

United States' production is forecast down 500,000 tons to 4.6 million. While production decreased in all growing areas, top-growing states Washington, New York, and Michigan experienced drought conditions, a hard frost in May, and excessive spring rainfall, respectively. In January 2015, the United States reached agreement with Chinese officials to allow all U.S. grown apples access to the Chinese market. Exports are forecast to remain stable at 1.0 million tons as increased exports to China offset lower shipments to Canada and Mexico. Imports are expected to rise a modest 10,000 tons to 173,000 on higher shipments from Chile.

Russia's production is forecast to remain at 1.4 million tons on stable bearing acreage. Imports are forecast to continue decreasing, down 38,000 tons to 780,000, as banned EU imports have not been fully replaced. As a result, consumption is expected to decline as consumers’ eroding purchasing power faces rising prices.

Chile's production is forecast flat at 1.4 million tons. Fewer bearable plantings are offset as producers transition to higher yielding varieties. Exports are forecast up 42,000 tons to 780,000 on higher exports to the United States and Russia.

Argentina's production is forecast to recover from last year's hail damage, increasing 80,000 tons to 720,000 on favorable growing conditions. This is still below historical levels as ongoing labor issues and rising input costs spur a continuing decline in acreage. Higher production is largely expected to go towards processing with exports forecast up slightly to 130,000 tons.

Mexico's production is forecast to decline a modest 17,000 tons to 700,000 as adverse weather affects yield and fruit quality. Imports are forecast down 24,000 tons to 290,000 on lower available supplies in the United States.

New Zealand's production is forecast at a record 550,000 tons on a compressed high-volume flower bloom that is expected to break the crop out of the biennial bearing cycle. Exports are forecast to rise 13,000 tons to 340,000 as New Zealand continues shifting product away from the EU towards Asian markets.

South Africa's production is forecast flat at 865,000 tons on normal growing conditions. As a result, exports are projected to remain stable at 455,000 tons.

Turkey's production is forecast to jump 451,000 tons to 2.7 million, rebounding from last year's frostdamaged crop. Exports are forecast to surge 62,000 tons to 190,000 on higher exports to Egypt and Iraq.

## Key Revisions to 2014/15:

Global Production is raised 5.6 million tons to 76.5 million.

- China is raised 3.1 million tons to 40.9 million on updated data.
- Iran production of 1.7 million tons is added. Iran is added to the PSD with data going back to 2001/02.
- Serbia is raised 152,000 tons to 332,000 due to updated data.

World imports are raised 948,000 tons to 6.0 million.

- The following 20 countries are added to the database, for a combined total of 884,000 tons; data was added back to 2001/02: Afghanistan, Albania , Angola, Bosnia \& Herzegovina, Burma (Myanmar), Dominican Republic, Egypt, Iraq, Israel, Kuwait, Nepal, Nigeria, North Korea, Oman, Pakistan, Qatar, Syria, Turkmenistan, Zambia, Zimbabwe.
- Belarus was raised 99,300 tons to 724,300 on higher imports from the EU.

World exports are raised 1.2 million tons to 6.7 million.

- The EU is raised 100,000 tons to 1.8 million tons on higher exports to Egypt and Algeria.
- The United States is raised 106,000 tons to 1.0 million tons on increased exports to Mexico and India.
- Belarus exports of 570,000 tons are added to the database; data was added back to 2001/02.
- Iran exports of 287,500 tons are added. Iran is added to the PSD with data going back to 2001/02.

## FRESH TABLE GRAPES

World table grape production is forecast up 479,000 tons to 21.1 million as continued growth in China more than offsets declines in Turkey. Although global trade is forecast to remain steady at 2.7 million tons, Peru is forecast to again increase its market share.

China's production is forecast to jump 800,000 tons to 9.6 million on higher area. Exports are forecast to surge 35,000 tons to 165,000 as lower prices and good quality fruit boost exports to neighboring Asian markets. Imports are forecast to rise 24,000 tons to 250,000 on higher shipments from top suppliers Chile and Peru.

Turkey's production is forecast to drop 345,000 tons to 2.0 million tons as the main growing region of Western Turkey was hit by a spring frost. Exports are forecast to drop 78,000 tons to 179,000 on lower output and reduced shipments to top market Russia, where a ban on certain Turkish imports goes into effect January 1, 2016.

Peru's production is forecast to rise a modest 10,000 tons to 510,000 as new plantings, driven by strong foreign demand, continue to come into production. Exports are forecast to rise 15,000 tons to 295,000 as market share continues to expand in top markets China and the EU.

EU's production is forecast up 49,000 tons to 1.7 million on increased output in Spain. Despite the Russian ban, exports are expected to remain stable at 105,000 tons on sustained exports to new markets in North Africa and the Middle East. Imports are projected down slightly to 600,000 tons on stable demand and higher domestic production.

United States' production is forecast up 29,000 tons to 984,000 on higher yield in California despite drought being a concern for many growers. Exports are forecast to remain flat at 390,000 tons on unchanging demand from top markets Canada and Mexico. Imports are forecast to slip 7,000 tons to 540,000 on lower available product from top supplier Chile.

Chile's production is forecast to contract slightly to 925,000 tons on continued low yields following last year's March floods and July snow that affected orchards in the north. Exports are forecast down 10,000 tons to 740,000 on lower exportable supplies.

Russia's production is forecast down 9,300 tons to 90,000 on reductions in both commercial and household production. Imports are forecast to fall 51,000 tons to 250,000 as consumer purchasing power continues to fall, consumption declines, and shipments from Turkey are reduced following Russia's ban.

Argentina's production is forecast to contract slightly to 100,000 tons on lower harvest area. Exports are forecast to slip to 20,000 tons.

## Key Revisions to 2014/15:

Global production is raised 38,000 tons to 20.6 million.

- Turkey is raised 430,000 tons to 2.4 million on updated data.
- Chile is lowered 277,000 tons to 929,000 on as a result of flooding and snow.
- China is lowered 200,000 tons to 8.8 million on updated data.

World exports are lowered 158,000 to 2.7 million.

- Chile is lowered 80,000 tons to 750,000 due to lower production.
- South Africa is lowered 57,000 tons to 264,000 on revised data and as a result of changing the marketing year to October-September.

## FRESH PEARS

World pear production is forecast up 922,000 tons to 25.3 million on greater production in China. Global trade is forecast up slightly on higher exports to Indonesia.

China's production is forecast up 1.0 million tons to 19.0 million on higher yield following favorable growing conditions in major producing areas. Exports are forecast up 28,000 tons to 360,000 on rising demand in Asian markets. Imports are expected to continue to grow, increasing 5,000 tons to 15,000 on rising demand for Western pears. The United States has been the largest pear supplier to China after gaining market access in 2013.

EU's production is forecast down 144,000 tons to 2.5 million due mainly to unfavorable weather conditions. Exports are forecast to remain stable at 415,000 tons despite Russia's ban on fruit from

China Continues to Dominate World Pear Production
 certain countries as Belarus continues to be an important market. Imports are forecast flat, at 220,000 tons, on unchanging demand for Southern Hemisphere supplies.

United States' production is forecast down 89,000 tons to 665,000 driven mostly by fewer bearing acres in top-growing states Washington and Oregon. Exports are forecast down 10,000 tons to 165,000 on smaller available supplies and lower shipments to Mexico. Imports are forecast up a modest 5,000 tons to 95,000 on lower domestic production and higher available supplies in Southern Hemisphere countries.

Argentina's production is forecast to return to more historical levels, increasing 70,000 tons to 650,000 on favorable growing conditions and despite a continued loss in growing area driven by ongoing labor issues and rising input costs. The increase in production is largely expected to go towards processing and consumption with exports forecast up only slightly to 310,000 tons.

Chile's production is forecast to rise a modest 10,000 tons to 300,000 on gains in planting area. Exports are forecast up 22,000 tons to 160,000 on higher shipments to the EU and United States.

South Africa's production is forecast slightly higher to 410,000 tons on normal growing conditions. Exports are forecast down 15,000 tons to 190,000 due to greater demand from the domestic processing industry.

Russia's production is forecast to remain flat at 160,000 tons due to unfavorable weather conditions. Imports are forecast to drop 24,000 tons to 240,000 largely due to the ban on fruit from certain countries. As a result, consumption is expected to decline as consumers’ eroding purchasing power faces rising prices.

## Key Revisions to 2014/15:

Global production is raised 185,000 tons to 24.4 million.

- EU production is raised 184,000 tons to 2.6 million on updated data.
- South Korea production of 303,000 tons is added. South Korea is added to the PSD with data going back to 2001/02.
- Taiwan production of 135,000 tons is added to the database; data was added back to 2001/02.

World imports are raised 64,000 tons to 1.6 million.

- Brazil is lowered 24,000 tons to 201,000 on lower imports from Argentina.
- EU is lowered 11,000 tons to 219,000 on lower imports from Southern Hemisphere countries.
- Indonesia is lowered 13,800 tons to 86,200 on lower imports from China.
- Russia is lowered 11,400 tons to 263,600 on updated data.

World exports are raised 149,000 tons to 1.8 million.

- Belarus exports of 163,000 tons are added to the data base; data was added back to 2001/02.
- South Korea exports of 23,300 tons are added. South Korea is added to the PSD with data going back to 2001/02.

## Marketing Years:

Apples - The United States and Mexico are on an Aug-July marketing year. All other Northern Hemisphere countries are on a July-June marketing year. Southern Hemisphere countries are on a calendar year indicated as the second year of the split year.

Table Grapes - The United States and Mexico are on a May-April marketing year. All other Northern Hemisphere countries are on a June-May marketing year. Southern Hemisphere countries of Argentina, Chile, and New Zealand are on a calendar year indicated as the second year of the split year; South Africa is on an October-September marketing year (adjusted from calendar) on the first year of the split year.

Pears - Northern Hemisphere countries are on a July-June marketing year. Southern Hemisphere countries are on a calendar year indicated as the second year of the split year.

Note: Northern Hemisphere countries are on a July-June marketing year. Southern Hemisphere countries are on a calendar year indicated as the second year of the split year. The abbreviation "nr" (not reported) indicates there was no 2014/15 data for that country when it was published in December 2014/15.
